GUIDE:PROF.RAJITHA P R

Abstract

- This project aims to develop an Online Student Course Enrollment System using PHP,MYSQL,HTML
- The system simplifies student registration, course viewing, and enrollment operations.
- Students can register, log in, view courses, enroll, submit reviews, and manage profiles.
- Instructors can manage their courses, and the admin maintains the platform.
- The system improves transparency and provides an efficient online learning environment.

INTRODUCTION

- Education is increasingly shifting towards digital learning platforms.
- Manual registration is time-consuming and error-prone.
- This project automates course enrollment using a web-based system.
- Provides separate access for Students, Instructors, and Admins.
- Improves efficiency and reduces paperwork.

RELEVANCE OF THE TOPIC

- Supports modern digital learning environments.
- Makes assignment submission easier for students.
- Helps instructors track and evaluate assignments efficiently.
- Provides a centralized system for academic management.
- Reduces manual work and improves organization.
- Similar concept used in systems like Moodle and Google Classroom.

OBJECTIVES

- To develop a web-based assignment management system.
- To allow instructors to create assignments and set deadlines.
- To enable students to upload assignments online.
- To allow instructors to review submissions and provide feedback.
- To maintain a centralized database of assignments and submissions.
- To improve efficiency and reduce manual work.

EXISTING SYSTEM

- Assignment submission is usually done **manually or through email**.
- Teachers must **collect and organize assignments manually**.
- Difficult to **track student submissions and deadlines**.
- Risk of **losing assignments or misplacing records**.
- Providing **feedback and grades takes more time**.
- No **centralized system** to store assignment data.

PROPOSED SYSTEM

- Students can register, log in, and enroll online.
- Instructors can add and manage courses
- Admin can monitor all activities
- Time-saving and accurate
- Online assignment submission system
- Easy tracking of deadlines and submissions
- Centralized database storage
- Faster grading and feedback

ADVANTAGE OF THE PROPOSED SYSTEM

- **Easy Assignment Submission** – Students can upload assignments online from anywhere.
- **Centralized Data Management** – All assignments and submissions are stored in one database.
- **Time Saving** – Reduces manual work for both instructors and students.
- **Easy Tracking** – Instructors can easily track submitted and pending assignments.
- **Improved Organization** – Assignments, deadlines, and submissions are well organized.
- **Quick Feedback and Grading** – Teachers can quickly review and provide grades or feedback.
- **Reduced Paper Usage** – Promotes a paperless academic environment.
- **Secure Data Storage** – Assignment records are safely stored in the system.

3/15/2026

FRONTEND OVERVIEW

- The frontend of the Online Course Enrollment System is built using HTML, CSS, and JavaScript to provide a clean and user-friendly interface for Students, Instructors, and Admins. It displays pages like login, course lists, enrollment, assignments, and dashboards in a simple and responsive layout. The frontend focuses on easy navigation, clear buttons, and readable forms so that users can quickly perform actions like enrolling in courses, adding materials, or managing accounts.

3/15/2026

BACKEND OVERVIEW

- The backend of the system is developed using PHP and MySQL, which handle all the main logic such as login authentication, course management, enrollment processing, and data storage. PHP processes user requests and connects with the MySQL database to save or retrieve information like students, instructors, courses, and enrollments. It also uses sessions, validation, and secure queries to ensure proper access control and protect data throughout the system.

TECHNOLOGY

- **HTML** – Used to create the structure of web pages.
- **CSS** – Used for designing and styling the user interface.
- **JavaScript** – Used to add interactivity and dynamic features.
- **PHP** – Used as the server-side scripting language to handle application logic.
- **MySQL** – Used as the database to store assignments, submissions, and user data.
- **XAMPP** – Used as the local server environment for running Apache and MySQL

FUNCTIONS OF STUDENT

- Register, Login, Logout
- View & Update Profile
- Browse Courses
- View Course Details
- Search Courses
- Enroll in Course
- View Enrolled Courses
- Access Course Materials
- View Instructor Replies
- Give Reviews and Request Certificate

FUNCTIONS OF INSTRUCTOR

- Login, Logout
- Add / Edit / Delete Courses
- Upload & Manage Assignments
- View Enrolled Students
- View & Reply to Student Review
- Approve Certificate

FUNCTIONS OF ADMIN

- Login / Logout
- Manage Students (View, Edit, Delete)
- Manage Instructors (View, Edit, Delete)
- Manage Courses (View, Approve, Delete)
- View Enrollments
- View & Reply to Reviews
- Generate Reports
- System Maintenance

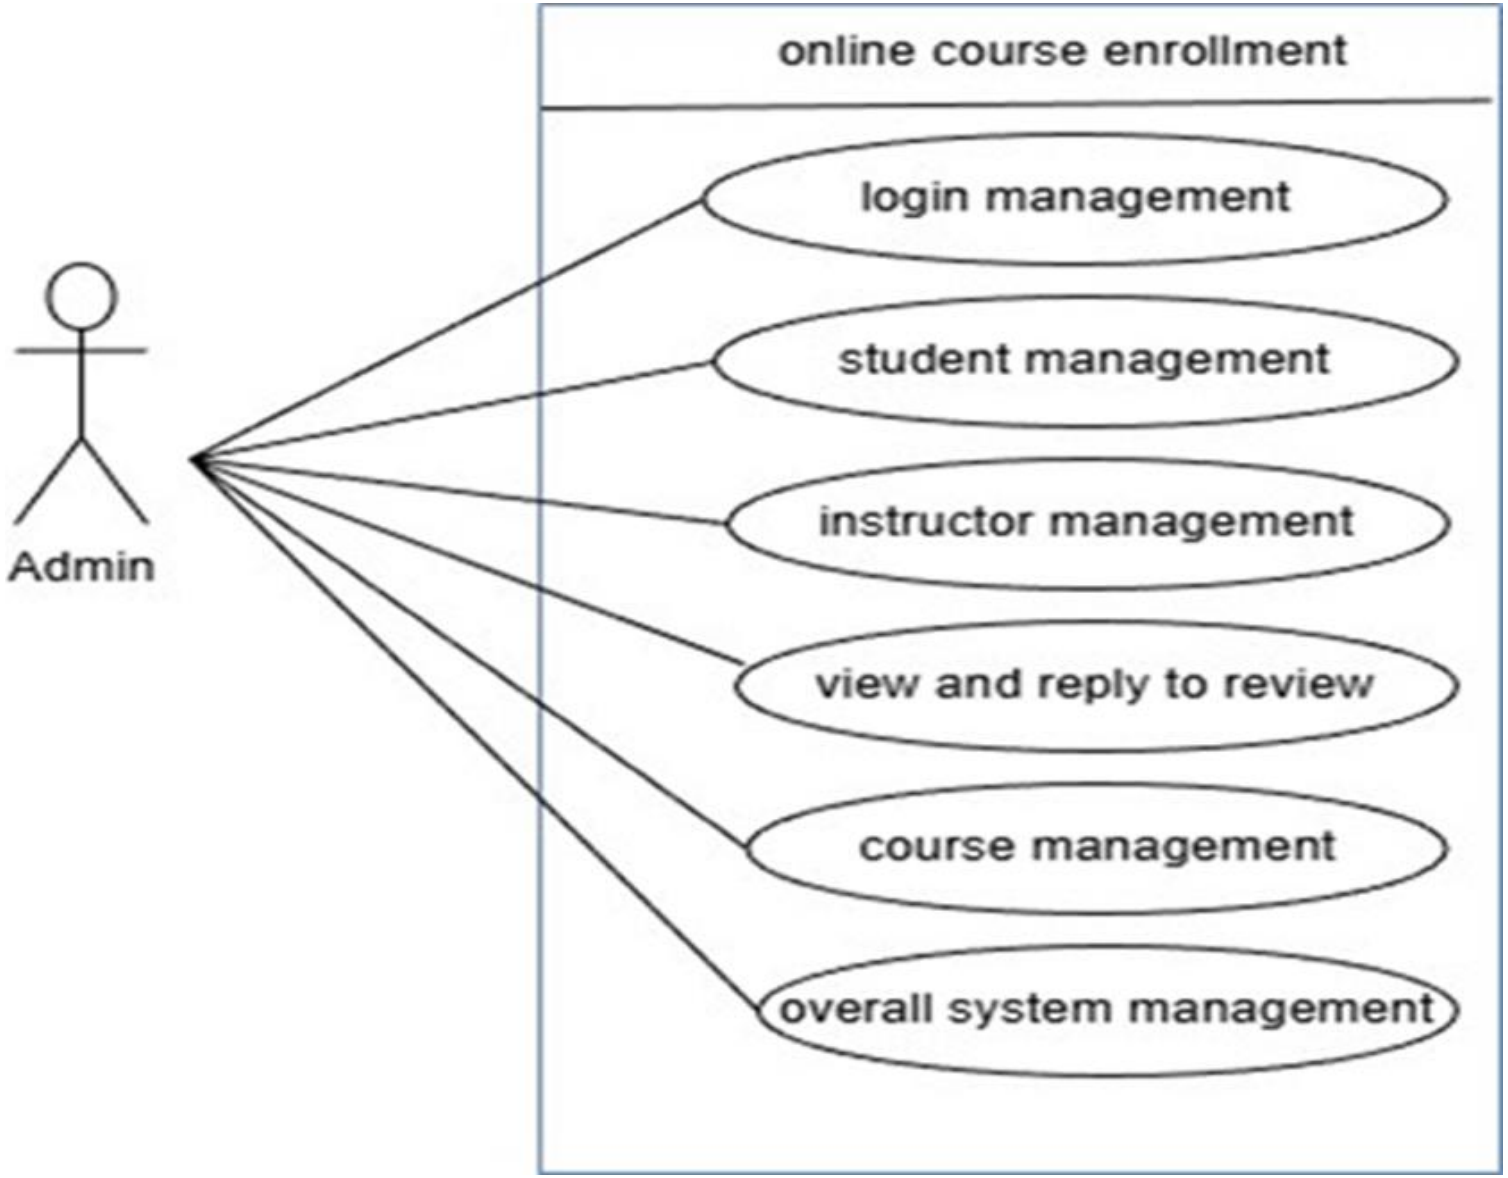
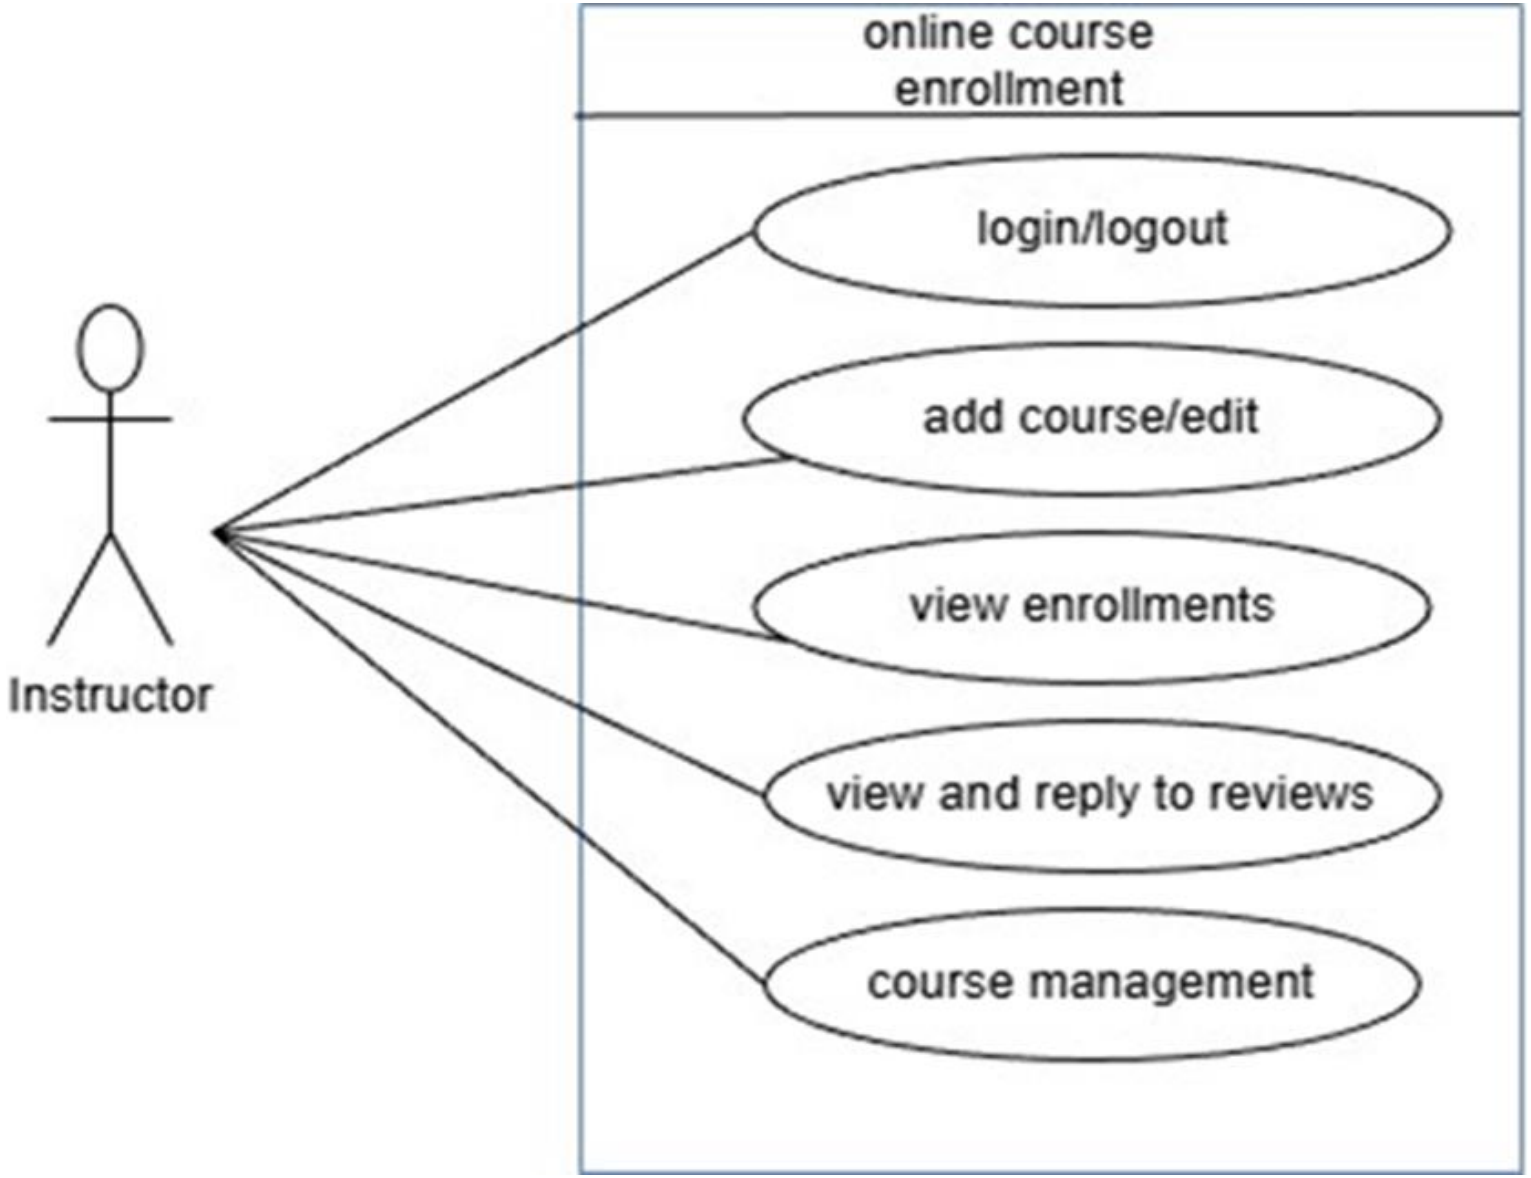
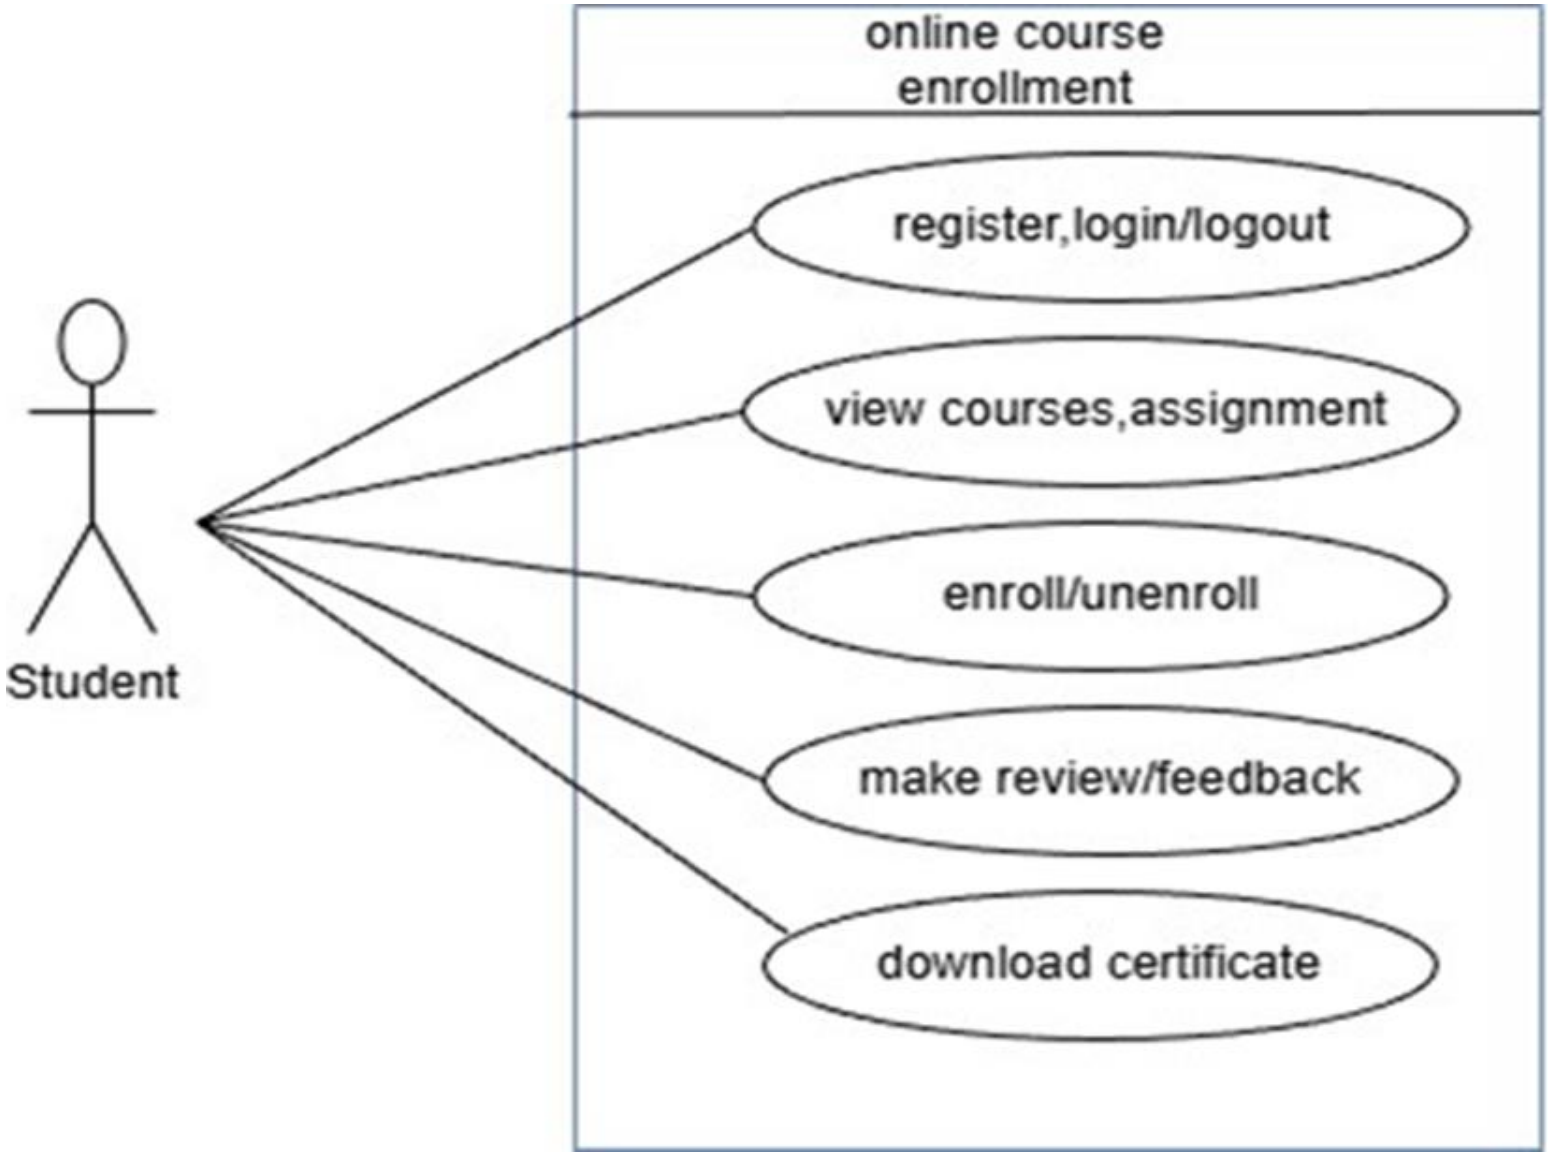
USE CASE DIAGRAM



INSTRUCTOR USE CASE DIAGRAM



STUDENT USE CASE DIAGRAM



STUDENTS TABLE

Field	Data Type	Constraints	Description
id	Int (11)	Primary key,auto_increment, not null	Student id
name	Varchar(150)	Not null	Student name
email	Varchar(150)	Not null	Student email
password	Varchar(255)	Not null	Encrypted student password
created_at	timestamp	Default current_ timestamp	Registration time
status	Varchar (20)	DEFAULT 'active’	Student account status

INSTRUCTORS TABLE

Field	Data Type	Constraints	Description
id	Int (11)	Primary key,auto_increment, not null	Instructor id
name	Varchar (150)	Not null	Instructor name
email	Varchar (150)	Not null	Instructor email
password	Varchar(255)	Not null	Encrypted password
created_at	timestamp	Default current_timestamp	Account creation date
status	Varchar (20)	DEFAULT 'active’	Instructor status

ADMINS TABLE

Field	Data Type	Constraints	Description
id	Int (11)	Primary key,auto_increment,not null	Unique admin id
username	Varchar (100)	Null allowed	Admin username
email	Varchar (150)	Not null	Admin email address
password	Varchar (255)	Not null	Encrypted admin password
created_at	timestamp	Default current_timestamp	Account creation time

COURSES TABLE

Field	Data Type	Constraints	Description
id	Int (11)	Primary key,auto_increment,not null	Course id
Instructor_id	Int (11)	Foreign key,not null	Instructor who created course
title	Varchar (200)	Not null	Course title
description	text	Null allowed	Course overview
duration	Varchar (100)	Not null	Course duration
content	text	Null allowed	Course content/lessons
image	Varchar (255)	Null allowed	Course image/thumbnail
created_at	timestamp	Default current_timestamp	Creation timestamp
status	Varchar (10)	DEFAULT 'active’	Course availability

ENROLLMENTS TABLE

Field	Data Type	Constraints	Description
id	Int (11)	Primary key,auto_increment, not null	Enrollment id
Student_id	Int (11)	Foreign key,not null	Student enrolled
Course_id	Int (11)	Foriegn key,not null	Course enrolled into
Enrolled_at	timestamp	Default current_timestamp	Enrolled time/date

REVIEWS TABLE

Field	Data type	Constraints	Description
id	Int (11)	Primary key,auto_increment,not null	Unique review id
Student_id	Int (11)	Foreign key,not null	Student who wrote the review
Course_id	Int (11)	Foreign key,not null	Course being reviewed
review	text	Not null	Review comment submitted by student
reply	text	Null allowed	Instructors reply to student review
Admin_reply	text	Null allowed	Admin's response if needed
Admin_id	Int (11)	Foreign key,null allowed	Admin who replied
Instructor_id	Int (11)	Foreign key,null allowed	Instructor who replied
created_at	timestamp	Default current_timestamp	Review submision time

ASSIGNMENTS TABLE

Field	Data type	Constraints	Description
id	Int (11)	Primary key,auto_increment,not null	Assignment id
course_id	Int (11)	Foreign key,not null	Course to which assignment belongs
title	Varchar (255)	Not null	Assignment title
description	text	Null allowed	Assignment details
file_path	Varchar (255)	Null allowed	File uploaded for assignment
deadline	date	Null allowed	Last submission date

SUBMISSIONS TABLE

Field	Data type	Constraints	Description
id	Int (1!)	Primary key,auto_increment,not null	Submission id
assignment_id	Int (11)	Foreign key,not null	Assignment that submitted
student_id	Int (11)	Foreign key,not null	Student submitting
file_path	Varchar(255)	Not null	Submitted file path
submitted_at	timestamp	Default current_timestamp	Submission time
grade	Varchar (100)	Null allowed	Marks/grade give
feedback	text	Null allowed	Instructor feedbacxk

Certificate_requests table

Field	Data type	Constraints	Description
id	Int (11)	Primary key,auto_increment,not null	Request id
student_id	Int (11)	Foreign key,not null	Requesting student
course_id	Int (11)	Foreign key,not null	Course for certificate
status	Enum(“pending”,”approved”,”rejected”)	Default pending	Request status
Requested_at	timestamp	Default current_timestamp	Time of request
Instructor_id	Int (11)	Foreign key,null allowed	Instructor handling request
Approved_at	timestamp	Null allowed	Approval time

Certificates table

Field	Data type	Constraints	Description
id	Int (11)	Primary key,auto_increment, not null	Certificate id
student_id	Int (11)	Foreign key,not null	Student who recieved certificate
course_id	Int (11)	Foreign key,not null	Course completed
certificate_file	Varchar(255)	Not null	File path of generated certificate
generated_at	timestamp	Default current_timestamp	Certificate generation time

Course_progress table

Field	Data type	Constraints	Description
id	Int (11)	Primary key,auto_increment, not null	Progress id
student_id	Int (11)	Foreign key,not null	Student id
course_id	Int (11)	Foreign key,not null	Course id
progress	Int (11)	Default 0	Course completion percentage
last_update	timestamp	Default current_timestamp on update current_timestamp	Last update date

TEST CASES FOR STUDENT

id	scenario	input	Expected output
ST01	Student login valid	Correct email and password	Dashboard opens
ST02	Login invalid	Wrong password	Error message
ST03	Enrollment	Click "enroll"	Enrollment success and view course details
ST04	Review submission	Enter review	Review stored successfully

TEST CASES FOR INSTRUCTOR

id	Scenario	input	Expected output
IN01	Instructor login	Valid inputs	Login success
IN02	Add course	All fields filled	Course added
IN03	Edit course	Updated fields	Changes saved

TEST CASES FOR ADMIN

id	Scenario	input	Expected output
AD01	login	Valid credentials	Dashboard opens
AD02	Delete student	Click"delete"	Students removed
AD03	Reply to review	Type reply	Reply send

DRAWBACKS

- The system does not include advanced security features such as two-factor authentication, which may affect data security.advanced security features such as two-factor authentication, which may affect data security.advanced security features **such as two-factor authentication, which may affect data security.**
- It **depends on a stable internet connection**, so performance may decrease with poor connectivity.
- The system may **not work efficiently on older mobile devices** or low-performance systems.
- Since it is developed using **basic PHP and MySQL**, it does not support **real-time features** like live notifications or chat.
- The **user interface is simple** and may not provide a modern user experience like advanced learning platforms.
- The system does **not support multimedia streaming** for course videos or interactive content.
- There is **no automated grading system**, so instructors must grade assignments manually.
- Compared to large-scale Learning Management Systems, the **overall functionality is limited**.

CONCLUSION

- The **Online Course Enrollment System** provides a centralized and user-friendly platform for students, instructors, and administrators.
- It automates the process of **course browsing, enrollment, review management, and communication**.
- Students can **easily search and enroll in courses**.
- Instructors can **manage course content and respond to student queries efficiently**.
- The admin can **monitor and manage all activities within the system**.
- The system **reduces manual work and improves operational efficiency**.
- It improves **data accuracy and organization**.
- Overall, the system ensures **smooth and effective management of online courses**.

FUTURE SCOPE

- Integration of a complete **Learning Management System (LMS)** with features like online exams and course tracking.
- Addition of **chatbot support** to assist students with queries instantly.
- Implementation of **AI-based course recommendation systems** to suggest suitable courses for students.
- Integration of **online payment gateways** to support paid course enrollment.
- Development of a **mobile application** to make the platform more accessible for users.
- Implementation of **advanced analytics and dashboards** for administrators and instructors.
- Tools to **track student performance and course effectiveness** more efficiently.
